## SUMMARY

---

I am a Full Stack Developer with hands-on experience building scalable web and system-level applications using technologies like React, Node.js, Django, and REST APIs. I have worked on real-world projects under tight deadlines, developing full-stack platforms as well as security-focused tools such as SEVE.

## ACADEMIC QUALIFICATION

---

|                                                                                                                                     |                                        |
|-------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|
| <b>Thakur College of Engineering and Technology, University of Mumbai</b><br><i>Bachelor of Engineering in Computer Engineering</i> | Mumbai, India<br>Aug. 2023 – Jun. 2027 |
| <b>Maharashtra State Board</b><br><i>Higher Secondary School Certificate (H.S.C)</i>                                                | Mumbai, India<br>Jun. 2020 – May 2022  |
| <b>Maharashtra State Board</b><br><i>Secondary School Certificate (S.S.C)</i>                                                       | Mumbai, India<br>May 2020              |

## SKILLS

---

**Languages:** Java, JavaScript, Python, C/C++, HTML, CSS  
**Frameworks & Web:** React, Node.js, Django, Bootstrap  
**AI / ML:** TensorFlow.js, MediaPipe, NLP  
**Databases:** MongoDB, Firebase  
**Developer Tools:** Git, GitHub, Vercel, Postman, VS Code

## PROJECTS

---

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| <b>SEVE – Secure Erase Verification Engine (Windows)</b>   C++, Python<br>– Developed a Windows utility for scanning and permanently deleting system files.<br>– Implemented multi-pass overwrite to prevent third-party data recovery.<br>– Designed the tool for forensic-grade data sanitization, malware detection and real time system monitor.<br>– Developed an Android application in Kotlin to monitor app behavior and send real-time alerts when applications access the microphone or camera in the background.                                                                                        | Aug 2025 - Ongoing |
| <b>ASET – Academy Safety &amp; Evidencing Truth</b>   AI, NLP, Research Databases<br>– Built a platform to verify Space Science claims using peer-reviewed research papers.<br>– Indexed and queried over <b>1.2 million research papers</b> from a structured database.<br>– Added document claim verification with highlighted overlays for detecting misinformation inside uploaded documents.<br>– Developed a YouTube video claim analyzer to identify and validate scientific claims from video transcripts.<br>– <b>AWS AIdeas Global Champion</b> for innovative AI-driven research verification solution. | Nov 2025 - Ongoing |

## INTERNSHIP

---

|                                                                                                                                                                                                                                                                                                                                                                                                       |                       |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| <b>Full Stack Developer Intern [NavRasa It Solutions, Jaipur]</b><br><i>Gear Gains</i><br>– Developed the complete backend for <b>Gear Gains</b> , a smart investment platform.<br>– Designed REST APIs for investment, transactions, and payout workflows.<br>– Integrated <b>Razorpay</b> for secure payment processing.<br>– Ensured authentication, validation, and production-level reliability. | Nov. 2025 – Jan. 2026 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|

## CO / EXTRA-CURRICULAR ACTIVITIES & ACHIEVEMENTS

---

**AWS AIdeas Global Champion** for Project ASET in 10,000 AIdeas Submission.  
**KnowCode Hackathon Winner – 1st Prize** for Project SEVE.  
**IIT Delhi BECON'26 Blueprint Finalist** – Qualified among the top 12 teams.  
Participated in **more than 10 hackathons**.
